

GITIGNORE

Dr. T. Brenda Chandrawati, ST., MT

Introduction

.gitignore adalah sebuah file yang dapat disimpan dalam repositori git kita agar kedepannya pada saat melakukan **add** dan **commit** ada file yang tidak ikut terbawa dalam **add**.

Misal : file system → dsstore (mac), thumbs (windows)

Introduction

Tujuan :
Mengabaikan/meng-ignore file dan
mendaftarkannya dalam file gitignore

Let's try

- Buka akun github
- Buat repository baru

Create a new repository

A repository contains all project files, including the revision history. Already have a project repository elsewhere? [Import a repository.](#)

Owner *

BrendaWinarko ▾

/

Repository name *

coba-gitignore ✓

Great repository names are short and memorable. Need inspiration? How about [symmetrical-telegram?](#)

Description (optional)

kumpulan file yang tidak perlu dikirim saat melakukan commit

Public

Anyone on the internet can see this repository. You choose who can commit.

Private

You choose who can see and commit to this repository.

Initialize this repository with:

Skip this step if you're importing an existing repository.

Add a README file

This is where you can write a long description for your project. [Learn more.](#)

Add .gitignore

Choose which files not to track from a list of templates. [Learn more.](#)

.gitignore template: None ▾

Choose a license

A license tells others what they can and can't do with your code. [Learn more.](#)

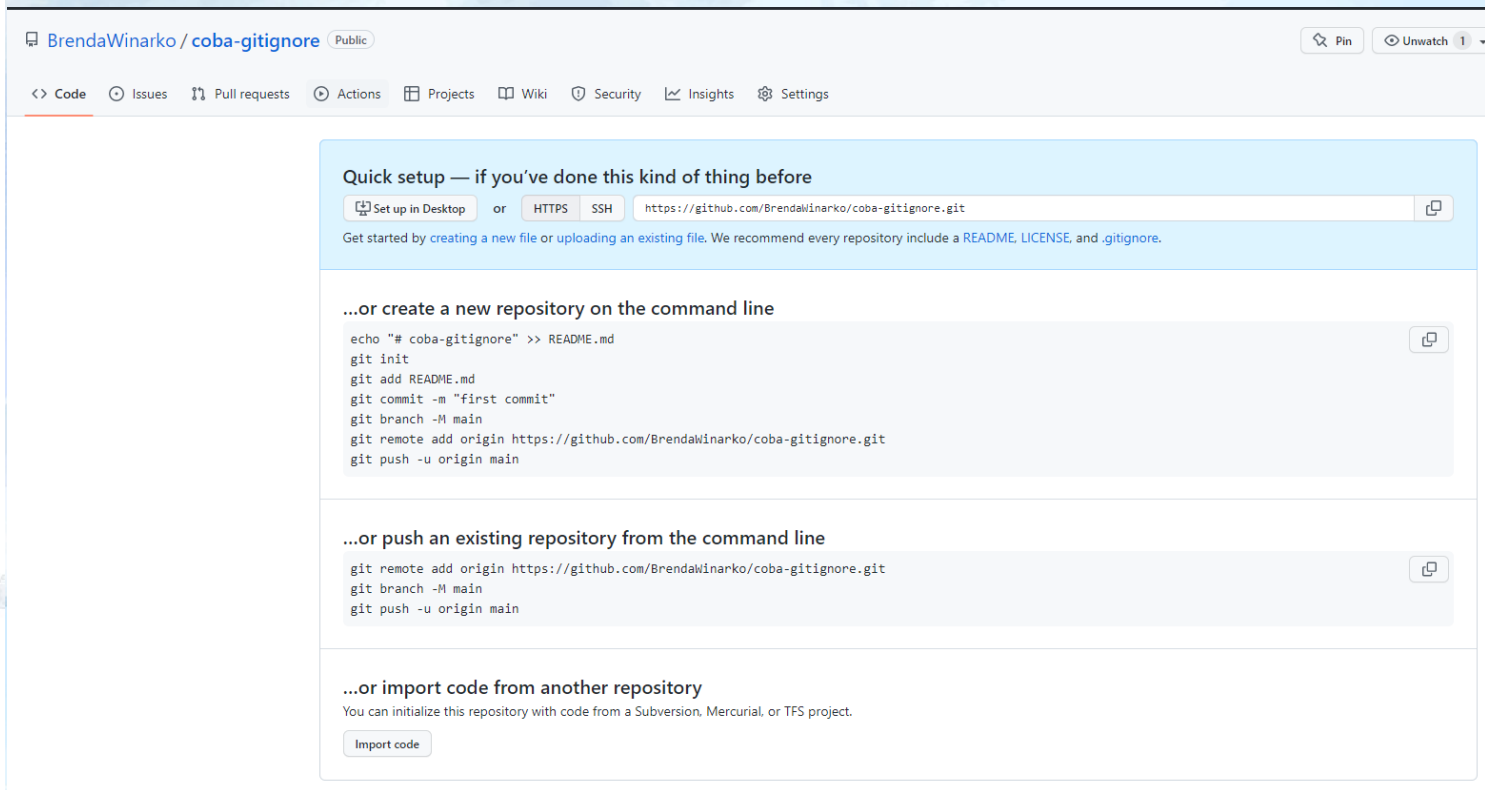

License: None ▾

You are creating a public repository in your personal account.

Create repository

Let's try

BrendaWinarko / **coba-gitignore** Public

<> Code Issues Pull requests Actions Projects Wiki Security Insights Settings

Quick setup — if you've done this kind of thing before

Set up in Desktop or HTTPS SSH <https://github.com/BrendaWinarko/coba-gitignore.git>

Get started by [creating a new file](#) or [uploading an existing file](#). We recommend every repository include a [README](#), [LICENSE](#), and [.gitignore](#).

...or create a new repository on the command line

```
echo "# coba-gitignore" >> README.md
git init
git add README.md
git commit -m "first commit"
git branch -M main
git remote add origin https://github.com/BrendaWinarko/coba-gitignore.git
git push -u origin main
```

...or push an existing repository from the command line

```
git remote add origin https://github.com/BrendaWinarko/coba-gitignore.git
git branch -M main
git push -u origin main
```

...or import code from another repository

You can initialize this repository with code from a Subversion, Mercurial, or TFS project.

Import code

Let's try

MINGW64:/d/Git_GitHub/coba-gitignore

```
User@MSI MINGW64 /d/Git_GitHub
$ mkdir coba-gitignore
```

```
User@MSI MINGW64 /d/Git_GitHub
$ cd coba-gitignore
```

```
User@MSI MINGW64 /d/Git_GitHub/coba-gitignore
$ git init
Initialized empty Git repository in D:/Git_GitHub/coba-gitignore/.git/
```

```
User@MSI MINGW64 /d/Git_GitHub/coba-gitignore (master)
$ |
```

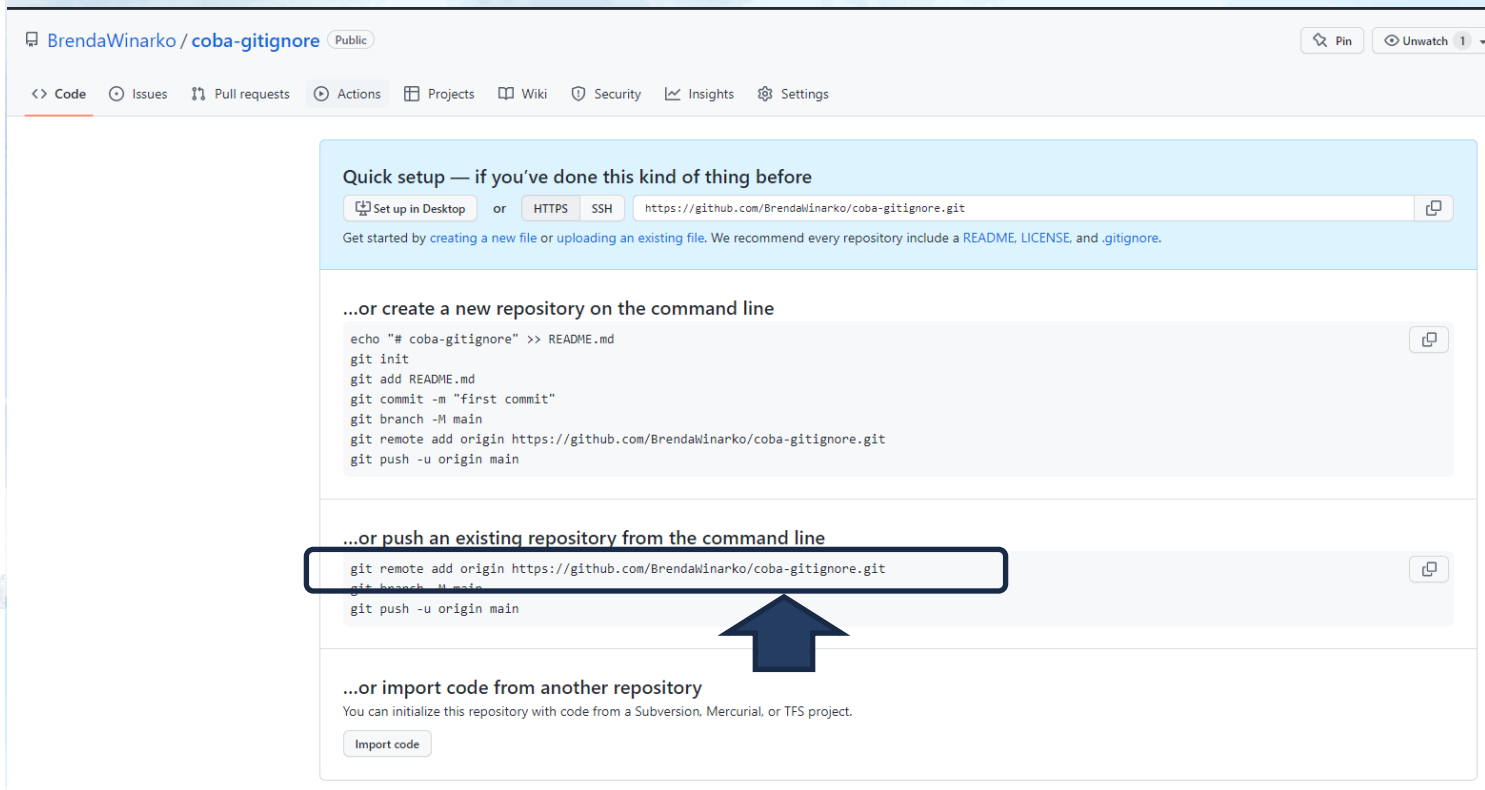

Let's try

MINGW64:/d/Git_GitHub/coba-gitignore

```
User@MSI MINGW64 /d/Git_GitHub/coba-gitignore (master)
$ code .
```

```
User@MSI MINGW64 /d/Git_GitHub/coba-gitignore (master)
$ |
```

Let's try

The screenshot shows the GitHub interface for the repository 'BrendaWinarko / cobra-gitignore'. The repository is public. The navigation bar includes links for Code, Issues, Pull requests, Actions, Projects, Wiki, Security, Insights, and Settings. The main content area displays three options for setting up the repository:

- Quick setup — if you've done this kind of thing before**: Includes a button for 'Set up in Desktop', a link for 'HTTPS', and a text input field containing the repository URL: `https://github.com/BrendaWinarko/cobra-gitignore.git`.
- ...or create a new repository on the command line**: Provides a list of commands to initialize a new repository:

```
echo "# cobra-gitignore" >> README.md
git init
git add README.md
git commit -m "first commit"
git branch -M main
git remote add origin https://github.com/BrendaWinarko/cobra-gitignore.git
git push -u origin main
```
- ...or push an existing repository from the command line**: Provides a list of commands to push an existing repository:

```
git remote add origin https://github.com/BrendaWinarko/cobra-gitignore.git
git branch -M main
git push -u origin main
```
- ...or import code from another repository**: Includes a button for 'Import code'.

A blue arrow points to the `git remote add origin https://github.com/BrendaWinarko/cobra-gitignore.git` command in the second section, which is also highlighted by a blue box.

Let's try

MINGW64:/d/Git_GitHub/coba-gitignore

```
User@MSI MINGW64 /d/Git_GitHub/coba-gitignore (master)
$ git remote add origin https://github.com/BrendaWinarko/coba-gitignore.git
```

```
User@MSI MINGW64 /d/Git_GitHub/coba-gitignore (master)
```

```
$ git status
On branch master
```

```
No commits yet
```

```
Untracked files:
```

```
(use "git add <file>..." to include in what will be committed)
```

```
index.html
style.css
```

```
nothing added to commit but untracked files present (use "git add" to track)
```

```
User@MSI MINGW64 /d/Git_GitHub/coba-gitignore (master)
```

```

gitignore.io

Create useful .gitignore files for your project

Create

[Source Code](#) | [Command Line Docs](#)

Let's try

The screenshot shows a web browser window with the address bar displaying `toptal.com/developers/gitignore/`. The page features a dark blue header with the Toptal logo and navigation links for various developer roles: [Drupal Developers](#), [Game Developers](#), [Hadoop Developers](#), [iOS Developers](#), and [Java Developers](#). Below the header, a blue banner contains the Toptal logo and the text `gitignore.io`. The main content area is white and displays the `gitignore.io` logo in blue, followed by the tagline "Create useful .gitignore files for your project". A form at the bottom allows users to select technologies for their project, with buttons for `Windows`, `VisualStudioCode`, and `Laravel`, each with a close icon. A green `Create` button is positioned to the right of the form. At the bottom of the page, there are links for [Source Code](#) and [Command Line Docs](#).

Tugas

Apa yang terjadi jika file yang seharusnya di-ignore sudah terlanjur di-commit sebelum ditambahkan ke .gitignore? Bagaimana cara menghapus file tersebut dari tracking Git?

Thanks!
